1. Summary

This project is designed for building a software blog for an influencer where he can posts and shares his ideas and visitors can read what he types and they can log in.

2. Project Objectives

- The web is for an influencer as a blog who can share his memories and mind.

- The influencer will be the admin of the web and he has the authority to add another admin or add users or remove what he wants.

- We have two types of visitors (basic and premium)

- The basic one can only log in after that he can like, comment and search for posts or contents of the influencer.

- The premium one can log in and do same things of the basic one but he can also add posts after taking permission from the admin.

3. Business Requirements

- A general Description of the requirements

- Business Requirement Document(BRD)

- Software Requirement Specifications(SRS)

- UI wireframe or design using (Adobe XD, or any other tool)

- Database ER Diagram as PDF file(+B)

4. Project scope

Designing a website for an influencer who will the admin and he can share posts and the visitors can take a look on the web and can have an account on it by registering as users. Users are two types basic and premium (special) .Users can likes and comments on posts. Also they can search for posts by words, category also title. The premium user can contact with the admin to have an account that he can share posts like admin. The influencer is the controller of the blog. He can also add another admin. The scope is that the user can read the interests of the admin and they can give their opinion of the content and also save what they want in pinned section .Also they can register as premium user that can share posts.
